(54) Title: CONVEYOR SYSTEM WITH BUFFER ARRANGEMENT

(57) Abstract

The present invention relates to a conveyor system and the operation of a conveyor system for conveying articles, such as e.g. baggage at an airport, in which system a buffer arrangement is provided for storing and pre-sorting of at least a part of the article-flow through the system. A conveyor system for conveying and sorting articles for a number of different destinations may be operated with a much lower number of stations for discharging the articles if the possibility of pre-sorting and temporarily storing the articles exists within the system. In particular, the invention concerns a storage rack for storing articles and a conveyor system comprising such a storage rack.
